

Cluster Analysis Report — Cluster 2

Generated: 20251205_224937
Customer Count: 5

Executive Summary

This cluster of high-income, self-employed individuals in tier 1 cities presents a promising opportunity for car loan offerings. Despite their excellent credit scores, the varied confidence scores suggest a need for more nuanced risk assessment models. By focusing on tailored products and refined scoring methodologies, the sales team can effectively target and convert these potential customers into loan recipients, leveraging their strong financial profiles and urban residency.

Cluster Overview

This cluster consists of self-employed individuals residing in tier 1 cities with high incomes and excellent credit scores. Despite their strong financial profiles, the confidence scores vary significantly, suggesting mixed certainty in their eligibility for car loans.

Confidence Score Distribution

Average: -1.087
Range: -3.038 - 1.057
Median: -0.720

Key Prediction Factors

- 1. High income levels indicating strong financial capability
- 2. Excellent credit scores suggesting reliable credit behavior
- 3. Residence in tier 1 cities, often associated with better economic opportunities

Recommendations

- 1. Focus marketing efforts on self-employed individuals in tier 1 cities.
- 2. Develop tailored loan products that cater to high-income, self-employed customers.
- 3. Enhance confidence scoring models to better capture the nuances of self-employed income stability.
