

Cluster Analysis Report — Cluster 17

Generated: 20251207_120341
Customer Count: 5

Executive Summary

The cluster of customers analyzed shows a diverse range of confidence scores despite uniformly high incomes and credit scores, indicating potential areas for further investigation. The average confidence score is slightly negative, suggesting room for improvement in loan eligibility predictions. Recommendations include targeting high-income individuals with strong credit histories and exploring underlying factors affecting lower confidence scores. The sales team should prioritize outreach to tier 1 city residents, leveraging their financial stability to offer competitive loan packages.

Cluster Overview

This cluster consists of five salaried individuals predominantly residing in tier 1 cities with high incomes and good credit scores. Despite their financial stability, the confidence scores vary significantly, indicating differing levels of predicted eligibility for car loans.

Confidence Score Distribution

Average: -7.155
Range: -19.561 - 2.197
Median: -7.013

Key Prediction Factors

- 1. High income levels across the cluster
- 2. Good credit scores above 720
- 3. Majority residing in tier 1 cities

Recommendations

- 1. Focus on customers with high incomes and good credit scores for loan offers.
- 2. Investigate factors affecting confidence scores for high-income customers.
- 3. Target tier 1 city residents with personalized loan packages.
